

What is claimed is:

1. A data storage network, said network comprising:

a portable data storage device, said portable data storage device storing data, said data being a first type of data, said data storage device being incapable of processing said data; and

a purpose optimized device, said purpose optimized device being optimized to perform a specific task, said specific task being processing said data of said first type, said purpose optimized device being wirelessly connected to said portable storage device to perform said specific processing task.

2. The data storage network of claim 1 wherein said portable data storage device also stores data of a second type and wherein said purpose optimized device is incapable of processing data of said first type.

3. The data storage network of claim 2 wherein said data storage network further comprises a second purpose optimized device, said second purpose optimized device being optimized to perform a second specific task, said second specific task being processing said data of said second type.
